PROTECT YOUR BUSINESS—FROM ENDPOINT TO CLOUD, 24/7

Modern threats require modern solutions. With Next Perimeter's [MXDR](#), your business gets enterprise-grade security tailored for SMBs and mid-market businesses.

WHY MXDR IS A GAME-CHANGER FOR YOUR BUSINESS

The Challenges of Cybersecurity Today:

- **Remote and hybrid work environments** create vulnerabilities that attackers exploit.
- **Cloud adoption and SaaS applications** add complexity and require stronger security measures.
- **Legacy security tools** like VPNs and standalone EDR don't provide full visibility or rapid response capabilities.
- **Ransomware and phishing attacks** continue to evolve, targeting businesses of all sizes.

What MXDR Brings to the Table:

- **Comprehensive Coverage:** Protection across endpoints, networks, identities, and cloud applications.
- **Proactive Threat Detection:** AI-powered analytics and expert threat hunting to stop cyber threats before they escalate.
- **24/7 Managed Security:** A dedicated Security Operations Center (SOC) that continuously monitors and responds to threats.

HOW MXDR WORKS

Step 1: Unified Threat Detection

MXDR continuously monitors and detects threats across multiple layers:

- **Endpoints:** Identifies malware, ransomware, and unauthorized activity on company devices.
- **Networks:** Monitors traffic for suspicious patterns and potential intrusions.
- **Identities:** Detects login anomalies, credential theft, and privilege escalation attempts.
- **Cloud Applications:** Provides real-time monitoring for SaaS tools like Microsoft 365 and Google Workspace.

Step 2: Real-Time Response

- **Automated Security Orchestration and Response (SOAR):** Instantly isolates compromised devices, revokes risky user access, and blocks malicious IPs.
- **Human-Led Remediation:** Expert SOC analysts investigate and neutralize threats before they cause harm.

Step 3: Post-Incident Hardening

- **Detailed Forensics Reports:** Breakdown of incidents, response actions, and mitigation strategies.
- **Security Improvement Plans:** Guidance on how to strengthen defenses and prevent future attacks.

WHY NEXT PERIMETER'S MXDR STANDS OUT

1. Unified Security Platform

- Combines **SIEM, SASE, and MDR** into a single, streamlined solution.
- Eliminates vendor sprawl and integrates seamlessly with existing IT infrastructure.

2. AI-Powered Efficiency

- Uses **machine learning** to reduce false positives and improve detection accuracy.
- Prioritizes critical alerts, reducing alert fatigue and increasing operational efficiency.

3. Simple and Rapid Onboarding

- **90-second user and device onboarding** ensures fast implementation with minimal effort.
- **Agentless cloud integrations** streamline deployment for Google Workspace, Microsoft 365, and other SaaS tools.

4. Flexible Deployment Options

- Fully managed **or** co-managed options available.
- Customizable compliance support for frameworks such as **HIPAA, GDPR, and NIST**.

THE BUSINESS BENEFITS

For IT Teams:

- **Centralized security visibility** across all environments.
- **Fewer tools to manage**, reducing operational complexity.
- **Rapid response times** with an industry-leading 4-minute average acknowledgment time.

For Executives:

- **Reduced risk exposure** and lower likelihood of data breaches.
- **Enhanced compliance** without increasing administrative overhead.
- **Cost savings** by consolidating security tools into a single, effective solution.

For End Users:

- **Seamless access management** with passwordless authentication and SSO.
- **Minimal disruptions** while maintaining top-tier security.
- **A frictionless user experience** that prioritizes both security and productivity.

READY TO SECURE YOUR BUSINESS?

Next Perimeter's MXDR provides **enterprise-grade security without enterprise complexity**. Protect your business with **24/7 monitoring, real-time response, and simplified security operations**.

What You'll Get:

- **Comprehensive security coverage** tailored for SMBs and mid-market organizations.
- **Dedicated SOC support** ensuring rapid and efficient threat response.
- **Simplified deployment and management** for IT teams and executives alike.
