

SaaS Security Essentials:

Protecting Your Apps Made Easy

SSO

What it Does: One login across all apps

Benefit: Easier logins, full visibility

MFA

What it Does: Adds a second login layer

Benefit: Stops phishing & stolen password access

Zero Trust

What it Does: Verifies every user, device, & location

Benefit: Real-time adaptive security

You Can't Protect What You Can't See

Your business depends on apps like **Microsoft 365, Dropbox, and Salesforce**—but without proper safeguards, these tools can expose sensitive data to breaches and misconfigurations.

Why SaaS Security Matters

DID YOU KNOW? 99% of breaches stem from misconfigurations or compromised accounts

What's at Risk?

- **Sensitive Data:** Client files, financials, IP
- **Compliance Violations:** HIPAA, SOC 2, etc.
- **Brand Reputation:** Lost trust, lost customers

The Next Perimeter Advantage

1

Identity Protection

AI-driven login monitoring and seamless SSO

2

Device Compliance

Only secure, managed devices get access

3

Visibility & Reporting

Unified dashboard for threats & usage and monthly reports

Start Securing Your SaaS Apps Today

Securing your SaaS stack doesn't have to be complicated. With **Next Perimeter**, you can:

- ✓ Prevent breaches with centralized identity and device protection
- ✓ Simplify IT workflows with unified security policies
- ✓ Boost productivity with seamless, passwordless login experiences.
