

The IT Leader's Guide to Network as a Service

Simplify, Scale, Secure

How Modern Mid-Market Businesses Are Transforming IT with Always-On Security and Unified Solutions

Why IT Leaders Are Rethinking Networking and Security

Modern IT teams juggle remote users, hybrid infrastructure, and fragmented security stacks. Legacy solutions like VPNs and siloed SIEMs can't keep up.

Network as a Service (NaaS)—powered by SASE—unifies networking and security for smarter, scalable IT.

Limitations of Legacy Solutions

- **Legacy VPNs:** Manual activation leaves security gaps.
- **Standalone SIEMs:** Tough to integrate across cloud/traditional networks.
- **Fragmented Endpoint Tools:** Multiple vendors = complexity + cost.

Is Your Business Ready for Network as a Service?

- ✓ Are you managing a hybrid workforce?
- ✓ Do you rely on multiple tools for endpoint, network, and cloud security?
- ✓ Is integrating SIEM across environments a challenge?
- ✓ Are you concerned about gaps in VPN-based security?
- ✓ Do you need a scalable solution that grows with your business?

It's time to rethink your network.

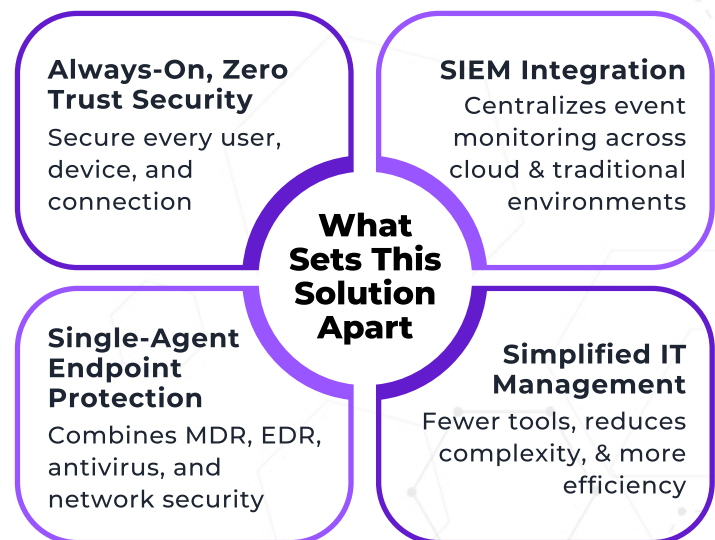

Benefits for IT & Leadership

FOR IT TEAMS

- Less time on vendor management and integration issues
- Faster response with unified threat detection

FOR LEADERSHIP

- Lower costs by consolidating tools
- Stronger security, reduced risk and downtime
